SECRET/SETURITY INFORMATION

air regiment was assigned one 37 mm AAA Battery which consisted of six gara. In some instances, an infantry regiment or division could be assigned to a specific airfield and consequently, increase the AAA firepower. However, in the event that such a situation existed and the infantry unit was ordered forward or to the rear, all AAA units subordinate to the infantry would move with them, leaving the airfield with only its own AAA units.

additional AAA firepower would be afforded any airfields except in such situations as mentioned above, since all the AAA units in the Soviet Zone of Germany were utilized and have specific assignments.

50X1-HUM

362 (13) 44

50X1-HUM

The major and only reason why other than tactical AAA had not been assigned to the Soviet Zone of Germany was that the Soviets were not concerned principally with the outcome of the East Zone of Germany, in the event of hostilities. Their main and primary defensive AAA purposes were to protect their tactical units and such targets, as mentioned above, from air attack. All other AAA concentrations would be in the USSR.

50X1-HUM

the Soviets consider the present AAA strength within the Soviet Zone of Germany to be sufficient to protect the necessary static targets. The Soviets are only interested in affording AAA protection to their tactical units and the above mentioned static targets.

50X1-HUM

The Soviets consider Allied air power to be surricient and in the event of hostilities would, more than likely be strengthened.

50X1-HUM

protecting the USSH.

the Soviets are more interested in
